

HANQING ZHU

Graduate Research Assistant - University of Texas at Austin
hqzhu@utexas.edu \diamond (512)200-6791 \diamond <https://zhuhanqing.github.io/>

RESEARCH INTERESTS

Efficient and robust AI computing system with emerging technology (optics), hardware-efficient machine learning, and VLSI design automation.

EDUCATION

The University of Texas at Austin (UT-Austin), TX, USA
Ph.D. student, Department of Electrical and Computer Engineering
Advisor: David Z. Pan
Co-advisor: Ray T. Chen
(GPA: 3.95/4.00)

Aug. 2020 – Present

Shanghai Jiao Tong University (SJTU), Shanghai, China
B.E., Dept. of Microelectronics Science and Engineering
(GPA: 3.81/4.00)
(Rank: 2nd/57)

Sept. 2016 – Jun. 2020

INTERNSHIP

Google LLC., CA, USA
Student Researcher
Google Brain Team, advised by Dr. Wenjie (Joe) Jiang

Jul. 2022 – Present

HONORS AND AWARDS

Winner at Robert S. Hilbert Memorial Optical Design Competition	Synopsys	2022
A. Richard Newton Young Student Fellow	DAC	2021
Shanghai Outstanding Graduate	Shanghai City	2020
Department Excellent Undergraduate Thesis	Shanghai Jiao Tong University	2020
Hongyi Scholarship	Shanghai Jiao Tong University	2019
Outstanding Undergraduate Scholarship	Shanghai Jiao Tong University	2019
Samsung Scholarship	Shanghai Jiao Tong University	2018
Zhiyuan College Honors Scholarship	Shanghai Jiao Tong University	2018
1st Prize, National Mathematical Contest in Modeling	Shanghai Division	2018
Academic Excellence Scholarship	Shanghai Jiao Tong University	2017-2019

RESEARCH EXPERIENCE

The University of Texas at Austin, TX, USA
Graduate Research Assistant, advised by Prof. David Z. Pan

Aug. 2020 – Present

- **AI-assisted photonic device simulation:** Proposed an AI-based physics-agnostic light field prediction framework with AI models; achieved over **2-order-of magnitude** faster than numerical simulators; outperformed previous AI-based simulation methods by $\sim 54\%$ lower prediction error.
- **Automatic Photonic Tensor Core Design:** Proposed a fully differentiable method to automatically search Photonic tensor core (PTC) circuit topology; achieved **$2\times\text{-}30\times$** higher footprint compactness with competitive matrix representability for neural network tasks.
- **Photonic neural chip tap-out:** Worked on tape-out for a butterfly-style silicon photonic-electronic neural chip; achieved **200 TOPS/mm²** compute density and around **9.5 TOPS/W** energy efficiency with foreseeable device technology.
- **Efficient optical AI computing system with analog activation:** Devised an energy-efficient analog activation unit for optical AI accelerator; demonstrated high expressiveness and **> 60%** activation and A/D conversion energy cost reduction.
- **Aging-resilient Photonic In-Memory Neurocomputing system:** Proposed an aging-aware co-optimization framework to enable aging-resilient photonic in-memory computing; achieved **$40\times$** dynamic energy cost and **$>20\times$** programming operations reduction.

- **On-device Learning for optical computing system:** Proposed an efficient on-chip learning protocol, *L2ight*, for optical computing system; devised a subspace learning procedure with multi-level sparsity to enable *in-situ* gradient evaluation and low computation cost; achieved 3-order-of-magnitude higher scalability and over **30×** better efficiency than previous optical on-chip training tools.
